

Dr. Sevinor Skincare Solutions
Face Lift Solution Frequently Asked Questions

Q: The pump on my bottle is not dispensing the treatment?

A: On your first use, it may take several attempts at pumping before the product dispenses from the bottle. This is normal and once the pump is full it will dispense the product smoothly.

Q: Once I apply the treatment how long should I leave it on my face?

A: You should leave the treatment on for at least 15-20 minutes.

Q: I left the treatment on for 20 minutes but it is still wet, what should I do?

A: Leave the treatment on until it is fully dry, this will make removing it much easier.

Q: During the treatment my face feels tight, is this normal?

A: Yes, the treatment is working to firm your skin as it exfoliates so you may feel tightness.

Q: The treatment is hard to peel off?

A: The treatment may be too thin. Make sure you use a thicker application of product at the edge of your face so it is easier to peel.

Q: Can I use this treatment with my other skincare products?

A: Yes, you can continue to use your other skincare products. However, always remember to use the Face Lift Solution on clean and dry skin. Once the treatment is complete you may use your other products.

Q: How many applications can I expect out of one bottle?

A: Depending on how often and how much you apply during each application, it may last up to two months.

Q: Can I use this product on any other areas besides the face?

A: Yes, you can use this product on your neck, chest and hands.
